

Paving projects planned five years in advance

Our road network is the most expensive piece of infrastructure that the county owns. By strategically monitoring the condition of the road network and planning for probable deterioration rates, we can maximize the annual road maintenance budget to provide the best value to our community.

The 5-year pavement management plan

Roads will be scheduled for resurfacing for the next five years. There are many variables that go into planning for road deterioration rates, so projects and their order may change, or specific roads may be removed or added. Road construction contractors are hired to complete these projects through a competitive bid process.
