Seeds for Sharing Gladstone Library

DISCLAIMER

Many seeds shared by this Seed Library were grown by community members with love and care like our ancestors have done for thousands of years. Please know they may not meet state germination or labeling standards.

The Seeds for Sharing Library cannot guarantee the germination rates or purity of the seeds provided. Seed saving and gardening carry an element of chance. If you should check out seed that doesn't come true, please let us know by sending an email to the library

Most of our seed has been donated by seed companies and we keep it until it reaches its expiration date. It is not for resale.

We do not knowingly accept or share any seeds that are chemically treated, patented, or genetically modified.

SEED GARDEN

We have a seed garden at New Urban High School, 1901 SE Oak Grove Blvd. You can volunteer any Thursday between 8:00 am and noon. For more information:

Facebook: Seeds for Sharing Library and Garden

Facebook: Gladstone Library

ABBREVIATIONS

AoT = Ark of Taste variety; Slow Food Movement

CAV = Climate Adapting Variety aka Modern Landrace/Grex

F1 = hybrid. Do not save seeds from plants you grow with these seeds. They will not produce the same plant.

L = Locally-grown seed

OSSI = Open Source Seed Initiative. OSSI was created by a group of plant breeders, farmers, seed companies, and sustainability advocates who want to free the seed! OSSI works with plant breeders who commit to making one or more of their varieties available exclusively under the OSSI Pledge. If you see OSSI in a listing, see the "pledge" in the next paragraph

OSSI Pledge:

You have the freedom to use these OSSI-Pledged seeds in any way you choose. In return, you pledge not to restrict others' use of these seeds or their derivatives by patents or other means, and to include this Pledge with any transfer of these seeds or their derivatives.

This "copyleft" commitment ensures that the Pledge is transmitted with any further distribution of the seed or the seed of any new varieties bred from it. In this way, OSSI preserves the unencumbered exchange of plant germplasm for breeding purposes and guarantees the rights of farmers and gardeners to save and replant seed.

For more information about the Open Source Seed Initiative, see www.osseeds.org

Please save seeds for the library!

The best seeds are your locally grown seeds. The more times you plant, save seed, and plant again, the more adapted the seed is to our changing environment. There is a Seed Saving Check-in form available:

- On top of the seed cabinet at the library
- Last page of this document – print, cut it apart and complete it

Please turn in your seeds and check-in form to the front desk at the library.

Natives

Alphabetical by Common Plant Name

| Scientific Name | Plant | Portland Plant List | Stratification | Scarification | Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer | Where | Cover Seeds | Ht. | Comments |
|---|-----------------------------|---------------------|-------------------------------|--------------------|---|-------------------------|------------------------|--------|--|
| Geum macrophyllum (large-leaved avens) | Avens | PPL | unknown – none to 90 days | No | F, early Sp | Sun/Part shade | shallow, cover lightly | 2' | Likely some stratification or a longer period of cool temps will enhance germination. Plants will not germinate until temps warm in spring. In pots and in situ - small pinch. |
| Agrostis exarata (spike bentgrass) | Bentgrass | PPL | No | No | F, Sp | Sun/Part shade | 1/8" | 10" | Seed heads 2 ft. Can be fall or spring sown. Cool temps enhance germination, if spring sowing, earlier is better. Fall sown seed will have increased likelihood of flowering the first spring. Spring sown seed may not flower until second growing season. In pots, and in situ small pinch |
| Collinsia grandiflora (large flowered blue-eyed Mary) | Blue-eyed Mary | PPL | No | No | late F, early Sp | Part sun | | 16" | Tolerates sun but is best in part shade. Habitat: Upland meadows and prairies, rocky areas, woodland edges. |
| Ranunculus occidentalis (western buttercup) | Buttercup | PPL | short, if any, possibly 2 wks | No | F | Full sun | | .5-2' | Habitat: most often associated with moist prairies and meadows but can be found in a variety of habitats with adequate seasonal moisture. |
| Dowlingia elegans | Elegant Calicoflower | | No | | | full sun to part shade | | 12" | Habitat: vernal pools, bogs, fens, naturally moist areas. |
| Lupinus polyphyllus | Lupine, Bigleaf | PPL | short | yes, if Sp planted | F, early Sp | Sun | 1/8 to 1/4" | 3 – 4' | Germination is affected by both temperature and scarification. If fall planting mother nature will take care of both. If spring planting you must scarify and then make sure the seed is exposed to cool temps so EARLY spring is best. |
| Asclepias speciosa | Milkweed (Showy) | | No | No | F, W, Sp | Sun | | 3-4' | Habitat: open, dry to moist sites. Appreciates good drainage. Germinates easily with average spring temperatures. Spreads by rhizomes. Deer resistant. Deciduous. |
| Allium cernuum | Nodding onion | (L) | 60 days | No | F, Sp | Full sun to light shade | | | Prefers well-drained soil but will tolerate clay soils. It thrives in difficult sites such as hot sun and gravelly soil. |
| Anaphalis margaritacea | Pearly Everlasting | (L) | No | No | F | Full sun/part sun | No | 20" | |

Seeds for Sharing Gladstone Library

(L) = Locally grown seed

| Natives | | Alphabetical by Common Plant Name | | | | | | | |
|--|-----------------------------------|-----------------------------------|----------------|---------------|---|----------------------|-----------------|--------|--|
| Scientific Name | Plant | Portland Plant List | Stratification | Scarification | Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer | Where | Cover Seeds | Ht. | Comments |
| <i>Plectritis congesta</i> | Seablush, Rosy plectritis | | Short, if any | | | Sun to partial shade | | 6-20" | Cool temps may enhance germination. Habitat: moist prairies to open upland sites. Considered drought tolerant. |
| <i>Prunella vulgaris</i> var. lanceolata (self-heal) | Self-Heal | PPL | No | No | F, W, Sp, Su | Sun/Part shade | Lightly | 6-20" | Can be fall or spring sown. Fall, winter sown seed may flower the following spring. If spring sowing, early spring. In pots, and in situ sow 5 – 7 seeds. |
| <i>Carex obnupta</i> | Slough Sedge | (L) | About 45 days | | | Sun to shade | | 2-3' | Habitat: boggy areas to standing water in forests, woodlands, meadows, and along rivers, streams and lakes |
| <i>Spiraea betulifolia</i> | Spirea, Birch-Leaf | PPL | No, or 60 days | | | Sun | surface sow | | Satisfactory germination occurs without stratification. |
| <i>Viola praemorsa</i> (canary violet) | Violet | PPL | 12 weeks | No | F | Full sun | shallow to 1/8" | 6-20" | Can be naturally or fridge stratified. Young plants go dormant early their first season, but put on a lot of growth their second. In pots and in situ - 5-10 seeds |
| <i>Verbena hastata</i> | Wild Hyssop, Swamp Verbena | (L) | 4 wks | No | F | Full sun/part sun | | 2-5' | Sand to clay soil; water needs - medium to moist |
| <i>Grindelia integrifolia</i> | Willamette Valley gumweed | PPL | No | No | F, W, Sp | Sun | Lightly | 12-30" | Cool temps enhance germination, so early spring planting is best. Spring sown should germinate within 3-4 weeks. In pots, and in situ sow 5 – 7 seeds. |
| <i>Achillea millefolium</i> | Yarrow | PPL(L) | No | | | Sun/Part shade | | 10-36" | Habitat: Varied; open moist prairies to dry hillsides. |

(L) = Locally grown seed (OSSI) = see pledge on page 1

Climate Adapting Variety (CAV) - Modern Landraces & Grex

These varieties are now integrated with the other varieties, but flagged with a special orange divider.

| Plant | Variety |
|----------------|--|
| Bean garbanzo | Lofthouse Landrace Garbanzo (L) |
| Beet | Three Root Grex (L) |
| Collard | Ultracross Collard (L) |
| Corn, Sweet | Astronomy Domine (L) |
| Dill | Landrace Mixed Varieties (L) |
| Flax | Lofthouse Landrace (L) |
| Melon | Lofthouse Green Landrace Lofthouse Special Muskmelon XL (L) |
| Parsley | Hungarian-German Landrace (L) |
| Pepper sweet | New Urban Perfect Italian (L) |
| Squash, Winter | Clackamas Maxima Squash (L) Lofthouse Landrace Maxima (L) |
| Sunflower | Lofthouse Mammoth XL (L) |

Landrace is a locally-adapted, genetically-diverse, promiscuously-pollinated, survival of the fittest crop that fosters food security and community. It is a blend of many varieties and has incredible vigor. It is highly adaptable to a changing growing environment.

Advantages

- Adaptability – more easily adapts to a changing growing environment than heirlooms, open pollinated, and hybrid varieties
- Easy seed saving – you don't have to worry about it crossing with another variety. Crossing is a good thing in a grex or landrace.
- Community – the more we share our grex and landrace seeds with each other, the more genetic diversity we achieve as a community.

Creating your own landrace

- Interplant as many different varieties of the same species as you can.
- If you like the taste of the produce, save seed from it and replant as many different varieties as you can next year
- Do not save seed from weak or diseased plants; only save seed from your best plants
- Give the library some of your seeds so your community can use it

TOMATOES

Too late to plant - seeds have been frozen to increase seed life

Tomato, **CHERRY** – smaller than 1 ounce

Determinate – Bush habit, produces all its fruit over a short period of time.

| | |
|--------------------|--------------------------|
| Tomato, cherry | Brandywine Cherry (L) |
| determinate | Green Grape (semi-det.) |
| | Koralik |
| | Rosita Brandywine Cherry |

Indeterminate – Vining habit, up to 10 ft. but typically 6 ft tall. Grows until killed by frost. Produces fruit over entire season.
