Seeds for Sharing Gladstone Library Catalog

DISCLAIMER

Many seeds shared by this Seed Library were grown by community members with love and care like our ancestors have done for thousands of years. Please know they may not meet state germination or labeling standards.

The Seeds for Sharing Library cannot guarantee the germination rates or purity of the seeds provided. Seed saving and gardening carry an element of chance. If you should check out seed that doesn't come true, please let us know by sending an email to the library

Most of our seeds have been donated by seed companies and we keep it until it reaches its expiration date. It is not for resale.

We do not knowingly accept or share any seeds that are chemically treated, patented, or genetically modified.

SEED GARDEN

We have a seed garden at New Urban High School, 1901 SE Oak Grove Blvd. You can volunteer any Thursday between 9:00 am and noon. For more information:

Facebook: Seeds for Sharing Library and Garden

Facebook: Oak Lodge Library

ABBREVIATIONS

AoT = Ark of Taste variety; Slow Food Movement

CAV = Climate Adapting Variety aka Modern Landrace/Grex

F1 = hybrid. Do not save seeds from plants you grow with these seeds. They will not produce the same plant.

L = Locally-grown seed

OSSI = Open Source Seed Initiative. OSSI was created by a group of plant breeders, farmers, seed companies, and sustainability advocates who want to free the seed! OSSI works with plant breeders who commit to making one or more of their varieties available exclusively under the OSSI Pledge. If you see OSSI in a listing, see the "pledge" in the next paragraph

OSSI Pledge:

You have the freedom to use these OSSI-Pledged seeds in any way you choose. In return, you pledge not to restrict others' use of these seeds or their derivatives by patents or other means, and to include this Pledge with any transfer of these seeds or their derivatives.

This "copyleft" commitment ensures that the Pledge is transmitted with any further distribution of the seed or the seed of any new varieties bred from it. In this way, OSSI preserves the unencumbered exchange of plant germplasm for breeding purposes and guarantees the rights of farmers and gardeners to save and replant seed.

For more information about the Open Source Seed Initiative, see www.osseeds.org

Please save seeds for the library!

The best seeds are your locally grown seeds. The more times you plant, save seed, and plant again, the more adapted the seed is to our changing environment.

There is a Seed Saving Check-in form available:

- On top of the seed cabinet at the library
- Last page of this document – print, cut it apart and complete it

Please turn in your seeds and check-in form to the front desk at the library.

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Geum macrophyllum	Avens, Large Leaf	PPL (L)	unknown – none to 90 days	No	F, early Sp	Sun/Part shade	shallow , cover lightly	2'	Likely some stratification or a longer period of cool temps will enhance germination. Plants will not germinate until temps warm in spring. In pots and in situ - small pinch.
Agrostis exarata (spike bentgrass)	Bentgrass	PPL	No	No	F, Sp	Sun/Part shade	1/8"	10"	Seed heads 2 ft. Can be fall or spring sown. Cool temps enhance germination, if spring sowing, earlier is better. Fall sown seed will have increased likelihood of flowering the first spring. Spring sown seed may not flower until second growing season. In pots, and in situ small pinch
Sisyrinchium idahoense (Idaho blue-eyed grass)	Blue-eyed grass	PPL (L)	12 weeks	No	F	Full sun/part shade	surface to very shallow	8-16"	Can be naturally or fridge stratified. Fall planted seed will not germinate until temps warm in the spring. In pots and in situ – small pinch
Collinsia grandiflora	Blue-eyed Mary	PPL	No	No	late F, early Sp	Part sun		16"	Tolerates sun but is best in part shade. Habitat: Upland meadows and prairies, rocky areas, woodland edges.
Potentilla gracilis (slender cinquefoil)	Cinquefoil	PPL	3 to 12 weeks	No	F	Sun/Part shade	surfae or slight cover	30"	Can be fall, spring or summer sown. Fall, winter sown may not bloom the following spring. Spring and summer sown seed will likely bloom the following spring. Germination time ? weeks. In pots, and in situ sow very small pinch.
Camassia quamash	Camas, Common	PPL(L)	12 weeks	No	mid-late Sp	Sun	1/8 - 1/4"	2'	Plant 5-7 seeds. Best to plant in fall to assure required stratification. If stratifying in fridge plant out in early spring so seeds can be exposed to cool temps. Seedlings look a lot like grass
Aquilegia formosa	Columbine, Red or Western	PPL(L)	5 days? 60-90 days?		F to late W	Full sun/part shade		2-3'	Needs moist, well-drained soil.
Clarkia rhomboidea	Diamond Clarkia		short, if any		F, Sp	full sun to part shade	No	1-3'	Broadcast seeds at a rate of approximately 60 seeds per square foot. If planting in a small pot or directly "in situ", use just a tiny pinch per location. Do not cover with soil.
Artemisia douglasiana	Douglas's Sagewort	PPL	only if planted in spring		Late F to W	Shade		3-5'	Grows on a variety of soil types in riparian habitats. It dies back over the winter and also with summer drought, the rhizomes spout with moisture and warmer temperatures in the spring.

Seeds for Sharing Gladstone Library

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Dowlingia elegans	Elegant Calico-flower		No			full sun to part shade		12"	Habitat: vernal pools, bogs, fens, naturally moist areas.
Clarkia amonena	Farewell-to-Spring	(L)	Short, if any		F, Sp	full sun to part shade	No	2-3'	Cool temps may enhance germination. Habitat: Moist meadows to open drier sites.
Erythronium Revolutum	Fawn Lily, Trout Lily, Dog Tooth Violets	(L)				full sun to part shade	No	8-12"	Thrives in understory. Prefers cool, moist environments.
tellima grandiflora	Fringecups	PPL			F	Part sun to full shade		24 - 30"	Though it prefers moist areas, once established, it tolerates seasonal dryness quite nicely. It can spread on its own via seed and runners to create patches of groundcover that can outcompete other weeds but it's easy to manage.
Ligusticum apiifolium (celery-leaved lovage or licorice-root)	Lovage	PPL	exact unknown but likely 10 to 12 weeks	No	F	Sun/shade	shallow, cover lightly	2-4"	Plant in the fall or stratify in the fridge. Fall planting outside is recommended. Germination can be sporadic. Fall seed sown outside may not germinate until temperatures warm in spring. In pots and in situ – small pinch
Lupinus polyphyllus	Lupine, Bigleaf	PPL	short	yes, if Sp planted	F, early Sp	Sun	1/8 to 1/4"	3 – 4'	Germination is affected by both temperature and scarification. If fall planting mother nature will take care of both. If spring planting you must scarify and then make sure the seed is exposed to cool temps so EARLY spring is best.
Asclepias speciosa	Milkweed (Showy)	(L)	No	No	F, W, Sp	Sun		3-4'	Habitat: open, dry to moist sites. Appreciates good drainage. Germinates easily with average spring temperatures. Spreads by rhizomes. Deer resistant. Deciduous.
Erythranthe guttatus	Monkey-flower, Yellow	PPL	No?	No	F, W, Sp	Sun/Part shade	No	12-24"	Keep soil moist after sowing. In pots, and in situ sow very small pinch.
Iris tenax	Oregon Iris	PPL				Sun/Part shade		10 - 20"	Dry to moist soil, prefers well-drained sandy or loamy soils. It can tolerate drought once established, but will not do well in clay.

Seeds for Sharing Gladstone Library

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Eriophyllum lanatum	Oregon Sunshine	PPL	2 weeks	No	F, Sp	Full sun/part shade	surface to 1/4"	1-2'	Cool temps enhance germination so if spring sowing early is best. While seedlings need moisture, they are prone to damping off. Do not overwater. In pots and in situ - small pinch
Anaphalis margaritacea	Pearly Everlasting	(L)				Full sun/part shade		1 - 3'	Prefers moist to dry soil. Fast growing, easy to grow. Late season pollinator favorite; medicinal; landscape uses include rock gardens, pollinator gardens and erosion control. Has separate male and female flowers, usually on separate plants.
Phacelia nemoralis	Phacelia, shade	PPL	Little to none		F, Sp	Full sun/part shade	Lightly	36"	Fall/winter sown seed may not germinate until temps warm in the spring. Spring sown should germinate within a couple of weeks. In pots, and in situ sow very small pinch.
Rupertia physodes	Scurf Pea	PPL	short	yes, if Sp planted	F, early Sp	Sun/Part shade	1/4"	to 2'	Information is conflicting, however in Willamette Valley it has been shown to germinate with little to no stratification IF SCARIFIED. If not scarifying then fall planting is recommended. In pots and in situ - 3-5 seeds
Prunella vulgaris var. lanceolata	Self-Heal	PPL	No	No	F, W, Sp, Su	Sun/Part shade	Lightly	6-20"	Can be fall or spring sown. Fall, winter sown seed may flower the following spring. If spring sowing, early spring. In pots, and in situ sow 5 - 7 seeds.
Carex obnupta	Slough Sedge	(L)	About 45 days			Sun to shade		2-3'	Habitat: boggy areas to standing water in forests, woodlands, meadows, and along rivers, streams and lakes
Spiraea betulifolia	Spirea, Birch-Leaf	PPL	No, or 60 days			Sun	surface sow		Satisfactory germination occurs without stratification.
Viola praemorsa	Violet, Canary	PPL	12 weeks	No	F	Full sun	shallow to 1/8"	6-20"	Can be naturally or fridge stratified. Young plants go dormant early their first season, but put on a lot of growth their second. In pots and in situ - 5-10 seeds.
Achillea millefolium	Yarrow	PPL(L)	No			Sun/Part shade		10-36"	Habitat: Varied; open moist prairies to dry hillsides.
Ranunculus occidentalis (PPL)	Western Buttercup	PPL	No		F, W, early Sp	Sun	Lightly	18"	Can be fall or spring sown. Fall, winter sown seed may flower the following spring. If spring sowing, early spring. In pots, and in situ sow 5 - 7 seeds.

Climate Adapting Variety (CAV) - Modern Landraces & Grex

These varieties are now integrated with the other varieties, but flagged with a special orange divider.

Plant	Variety
Bean garbanzo	Adapatation Variety (L)
Bean garbanzo	Lofthouse Landrace Garbanzo (L)
Bean pole dry	Clackamas Adaptation (L)
Bean runner	Clackamas Grex (Mix) (L)
Beet	Three Root Grex (L)
Collard	Ultracross Collard (L)
Corn	Astronomy Domine (L)
Dill	Mix (L)
Melon	GTS Adaptation Mix (L) Lofthouse Special Muskmelon XL (L)
Parsley	Hungarian-German Landrace (L)
Pepper Sweet	New Urban Sweet Italian (L)
Squash, Winter	Clackamas Maxima Squash (L)
Watermelon	New Urban Seed Garden Icebox Mix (L)

Landrace is a locally-adapted, genetically-diverse, promiscuously-pollinated, survival of the fittest crop that fosters food security and community. It is a blend of many varieties and has incredible vigor. It is highly adaptable to a changing growing environment.

Advantages

- Adaptability – more easily adapts to a changing growing environment than heirlooms, open pollinated, and hybrid varieties
- Easy seed saving – you don't have to worry about it crossing with another variety. Crossing is a good thing in a grex or landrace.
- Community – the more we share our grex and landrace seeds with each other, the more genetic diversity we achieve as a community.

Creating your own climate adapting variety (modern landrace)

- Interplant as many different varieties of the same species as you can.
- If you like the taste of the produce, save seed from it and replant as many different varieties as you can next year
- Do not save seed from weak or diseased plants; only save seed from your best plants
- Give the library some of your seeds so your community can use it
