

Seeds for Sharing Oak Lodge Library Catalog

DISCLAIMER

Many seeds shared by this Seed Library were grown by community members with love and care like our ancestors have done for thousands of years. Please know they may not meet state germination or labeling standards.

The Seeds for Sharing Library cannot guarantee the germination rates or purity of the seeds provided. Seed saving and gardening carry an element of chance. If you should check out seed that doesn't come true, please let us know by sending an email to the library

Most of our seeds have been donated by seed companies and we keep it until it reaches its expiration date. It is not for resale.

We do not knowingly accept or share any seeds that are chemically treated, patented, or genetically modified.

SEED GARDEN

We have a seed garden at New Urban High School, 1901 SE Oak Grove Blvd. You can volunteer any Thursday between 8:00 am and noon. For more information:

Facebook: Seeds for Sharing Library and Garden

Facebook: Oak Lodge Library

ABBREVIATIONS

AoT = Ark of Taste variety; Slow Food Movement

CAV = Climate Adapting Variety aka Modern Landrace/Grex

F1 = hybrid. Do not save seeds from plants you grow with these seeds. They will not produce the same plant.

L = Locally-grown seed

OSSI = Open Source Seed Initiative. OSSI was created by a group of plant breeders, farmers, seed companies, and sustainability advocates who want to free the seed! OSSI works with plant breeders who commit to making one or more of their varieties available exclusively under the OSSI Pledge. If you see OSSI in a listing, see the "pledge" in the next paragraph

OSSI Pledge:

You have the freedom to use these OSSI-Pledged seeds in any way you choose. In return, you pledge not to restrict others' use of these seeds or their derivatives by patents or other means, and to include this Pledge with any transfer of these seeds or their derivatives.

This "copyleft" commitment ensures that the Pledge is transmitted with any further distribution of the seed or the seed of any new varieties bred from it. In this way, OSSI preserves the unencumbered exchange of plant germplasm for breeding purposes and guarantees the rights of farmers and gardeners to save and replant seed.

For more information about the Open Source Seed Initiative, see www.osseeds.org

Please save seeds for the library!

The best seeds are your locally grown seeds. The more times you plant, save seed, and plant again, the more adapted the seed is to our changing environment. There is a Seed Saving Check-in form available:

- On top of the seed cabinet at the library
- Last page of this document – print, cut it apart and complete it

Please turn in your seeds and check-in form to the front desk at the library.

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Heuchera chlorantha (green-flowered alumroot)	Alumroot		No	No	F, W, Sp	Sun/shade	No	12-36"	Fall/winter sown seed may not germinate until temps warm in the spring. Spring sown should germinate within a couple of weeks. In pots, and in situ sow very small pinch.
Geum macrophyllum (large-leaved avens)	Avens	PPL	unknown – none to 90 days	No	F, early Sp	Sun/Part shade	shallow, cover lightly	2'	Likely some stratification or a longer period of cool temps will enhance germination. Plants will not germinate until temps warm in spring. In pots and in situ - small pinch.
Agrostis exarata (spike bentgrass)	Bentgrass	PPL	No	No	F, Sp	Sun/Part shade	1/8"	10"	Seed heads 2 ft. Can be fall or spring sown. Cool temps enhance germination, if spring sowing, earlier is better. Fall sown seed will have increased likelihood of flowering the first spring. Spring sown seed may not flower until second growing season. In pots, and in situ small pinch
Lomatium dissectum (fern-leaved biscuit root)	Biscuit Root		12 weeks	No	F	Full sun/part shade	1/4 - 1/2"	3-4'	Fall planting in situ is best. If fridge, seeds may begin to sprout earlier than 10 weeks so check regularly. If sprouting plant immediately and keep moist and cool outdoors. In pots and in situ 3 – 5 seeds
Sambucus mexicana	Blue Elderberry	PPL(L)	60 to 90 days	No	Late F		1/4"	6-16'	Warm stratification for 2-3 months followed by cold stratification for 3 months.
Gilia capitata	Blue field Gilia	PPL	short, if any	No		Sun/Part shade		12-36"	Annual. Cool temps enhance germination.
Sisyrinchium idahoense (Idaho blue-eyed grass)	Blue-eyed grass	PPL	12 weeks	No	F	Full sun/part shade	surface to very shallow	8-16"	Can be naturally or fridge stratified. Fall planted seed will not germinate until temps warm in the spring. In pots and in situ – small pinch
Camassia quamash	Camas, Common	PPL(L)	12 weeks	No	mid-late Sp	Sun	1/8 - 1/4"	2'	Plant 5-7 seeds. Best to plant in fall to assure required stratification. If stratifying in fridge plant out in early spring so seeds can be exposed to cool temps. Seedlings look a lot like grass
Camassia leichtlinii	Camas, Great	PPL	12 weeks	No	mid-late Sp	Sun/Part shade	1/8 - 1/4"	3'	Plant 5-7 seeds. Best to plant in fall to assure required stratification. If stratifying in fridge plant out in early spring so seeds can be exposed to cool temps. Seedlings look a lot like grass
Penstemon serrulatus	Cascade Penstemon	PPL	No	No		Full sun		1-2'	Soil: chalk, clay, loam, sand; moist but well-drained

Seeds for Sharing Oak Lodge Library

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Calochortus tolmiei (Tolmie's cat's ear)	Cat's ear	PPL	12 weeks	No	mid-Sp	Sun/Part shade	1/4"	6-14"	Plant 5-7 seeds. Best to plant in fall to assure required stratification. If stratifying in fridge plant out in early spring so seeds can be exposed to cool temps. Seedlings look a lot like grass
Sidalcea cusickii (Cusick's checkermallow)	Checker-mallow, Cusick's	(L)				Full sun/part shade		18-72"	Moist to wet soil.
Sidalcea campestris (meadow checkermallow)	Checker-mallow, Meadow	PPL	3 to 12 weeks	No	F	Sun/part shade	shallow , slight cover	4'	Germination is enhanced by cool temps and occurs sporadically over a long period of time. Fall/winter sown seed may not germinate until temps warm in spring. In pots and in situ – 5 – 10 seeds
Potentilla gracilis (slender cinquefoil)	Cinquefoil	PPL	3 to 12 weeks	No	F	Sun/Part shade	surfae or slight cover	30"	Can be fall, spring or summer sown. Fall, winter sown may not bloom the following spring. Spring and summer sown seed will likely bloom the following spring. Germination time ? weeks. In pots, and in situ sow very small pinch.
Collomia grandiflora	Collomia, Large Flowered	PPL(L)	2 wks			Sun		2'	Cooler temps are required for germination.
Aquilegia formosa (western columbine)	Columbine, Red or Western	PPL(L)	5 days? 60-90 days?		F to late W	Full sun/part shade		2-3'	Needs moist, well-drained soil.
Echinacea purpurea	Coneflower, Purple	(L)	No	No	F, Sp	Full sun/part sun		40"	
Symphyotrichum subspicatum	Douglas Aster	PPL	No	No	F, Sp	Sun to light shade		1-3'	Grows best in well drained moist soil. Found along moist wood, stream banks and shore lines.
Dowlingia elegans	Elegant Calicoflower		No			full sun to part shade		12"	Habitat: vernal pools, bogs, fens, naturally moist areas.
Clarkia amonena	Farewell-to-Spring		Short, if any			Sun		2-3'	Cool temps may enhance germination. Habitat: Moist meadows to open drier sites.
Erythronium revolutum	Fawn Lily, Pink				F	Part shade		8-12"	Needs moist soil, even when dormant, do not let the soil dry out.
Deschampsia elongata	Hairgrass, Slender	PPL	No	No	F best, Sp	Sun best; part shade OK	No	12-18"	Can be fall or spring sown. Fall is best. This is early, cool season grass. If spring sowing early is best. Cooler temps may enhance germination. Keep moist, not wet. In pots, and in situ small pinch

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Deschampsia cespitosa	Hairgrass, Tufted	PPL	No	No	F, Sp	Sun best; part shade OK	Lightly if at all	12"	4 ft seed head. Can be fall or spring sown; if spring earlier is better. Light may enhance germination. Keep moist, not wet. In pots, and in situ small pinch
Triteleia hyacinthina (hyacinth brodiaea)	Hyacinth	PPL	12 weeks	No	early Su	Full sun	cover lightly	1-2'	Plant 5-10 seeds. Best to plant in fall to assure required stratification. If stratifying in fridge plant out in early spring so seeds can be exposed to cool temps. Seedlings look a lot like grass
Koeleria macrantha (prairie junegrass)	Junegrass	PPL	No	No	F but Sp is best	Sun/Part shade	No	7"	seeds 2 ft. Can be fall or spring sown, spring recommended as fall germinants can be damaged by extreme winter weather. Cool temps enhance germination so early spring is best. Light enhances germination. In pots, and in situ small pinch
Ligusticum apiifolium (celery-leaved lovage or licorice-root)	Lovage	PPL	exact unknown but likely 10 to 12 weeks	No	F	Sun/shade	shallow, cover lightly	2-4"	Plant in the fall or stratify in the fridge. Fall planting outside is recommended. Germination can be sporadic. Fall seed sown outside may not germinate until temperatures warm in spring. In pots and in situ – small pinch
Lupinus polyphyllus (bigleaf lupine)	Lupine, Bigleaf	PPL	short	yes, if Sp planted	F, early Sp	Sun	1/8 to 1/4"	3 – 4'	Germination is affected by both temperature and scarification. If fall planting mother nature will take care of both. If spring planting you must scarify and then make sure the seed is exposed to cool temps so EARLY spring is best.
Lupinus latifolius (broadleaf lupine)	Lupine, Broadleaf	PPL	short	yes, if Sp planted	F, early Sp	Sun	1/4 - 1/2"	1 – 2'	Germination is affected by both temperature and scarification. If fall planting mother nature will take care of both. If spring planting you must scarify and then make sure the seed is exposed to cool temps so EARLY spring is best.
Asclepias speciosa	Milkweed (Showy)		No	No	F, W, Sp	Sun		3-4'	Habitat: open, dry to moist sites. Appreciates good drainage. Germinates easily with average spring temperatures. Spreads by rhizomes. Deer resistant. Deciduous.
Wyethia angustifolia (narrowleaf mule's ear)	Mule's ear		12 weeks	No	F	Full sun	1/4 - 1/2"	2-3'	Can be naturally or artificially stratified. Once planted seeds germinate quickly as temps warm. Young seedlings go dormant earlier in the summer than you'd expect, - growing season will increase with age. In pots and in situ - 5 or so seeds

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
Allium cernuum	Nodding onion	(L)	60 days	No	F, Sp	Full sun to light shade			Prefers well-drained soil but will tolerate clay soils. It thrives in difficult sites such as hot sun and gravelly soil.
Dichelostemma congestum	Ookow	PPL	12 weeks	No					Plant 5-10 seeds. Best to plant in fall to assure required stratification. If stratifying in fridge plant out in early spring so seeds can be exposed to cool temps. Seedlings look a lot like grass
Eriophyllum lanatum	Oregon Sunshine	PPL	2 weeks	No	F, Sp	Full sun/part shade	surface to 1/4"	1-2'	Cool temps enhance germination so if spring sowing early is best. While seedlings need moisture, they are prone to damping off. Do not overwater. In pots and in situ - small pinch
Anaphalis margaritacea	Pearly Everlasting	(L)	No	No	F	Full sun/part sun	No	20"	
Phacelia nemoralis	Phacelia (Shade)	PPL	No	No	F, W, Sp	Sun/Part shade	Lightly	2'	Fall/winter sown seed may not germinate until temps warm in the spring. Spring sown should germinate within a couple of weeks. In pots, and in situ sow very small pinch.
Plaglobothrys figuratus	Popcorn Flower (Fragrant)		No	No	F	Full sun		4-12"	Habitat: vernal pools, wetlands, bogs, fens, naturally moist areas. Moist fields and open meadows.
Festuca roemerii	Roemer's Fescue	PPL	No	No	F but Sp is best	Sun best; part shade OK	No	12"	Can be fall or spring sown, spring recommended as fall germinants can be damaged by extreme winter weather. Cool temps enhance germination so early spring is best. Light enhances germination. In pots, and insitu small pinch
Rupertia physodes	Scurf Pea	PPL	short	yes, if Sp planted	F, early Sp	Sun/Part shade	1/4"	to 2'	Information is conflicting, however in Willamette Valley it has been shown to germinate with little to no stratification IF SCARIFIED. If not scarifying then fall planting is recommended. In pots and in situ - 3-5 seeds
Plectritis congesta	Seablush, Rosy plectritis		Short, if any			Sun to partial shade		6-20"	Cool temps may enhance germination. Habitat: moist prairies to open upland sites. Considered drought tolerant.
Erigeron glaucus	Seaside Daisy	(L)				Full sun/part shade		6-12"	Likes fertile, dry to medium moisture, well-drained soils.

(L) = Locally grown seed

Natives

Alphabetical by Common Plant Name

Scientific Name	Plant	Portland Plant List	Stratification	Scarification	Plant in F=Fall, W=Winter, Sp=Spring, Su=Summer	Where	Cover Seeds	Ht.	Comments
<i>Prunella vulgaris</i> var. <i>lanceolata</i> (self-heal)	Self-Heal	PPL	No	No	F, W, Sp, Su	Sun/Part shade	Lightly	6-20"	Can be fall or spring sown. Fall, winter sown seed may flower the following spring. If spring sowing, early spring. In pots, and in situ sow 5 – 7 seeds.
<i>Scutellaria lateriflora</i>	Skullcap, Mad Dog aka Hoodwort, Side-flowering Blue	(L)	About 30 days	No	F, Sp	Full sun/part sun		24"	Direct sow in late fall, pressing into the surface of the soil. For spring planting, mix the seeds with moist sand and store in the refrigerator for 30 days before planting. Keep the soil consistently moist until germination, which is notoriously slow and irregular.
<i>Carex obnupta</i>	Slough Sedge	(L)	About 45 days			Sun to shade		2-3'	Habitat: boggy areas to standing water in forests, woodlands, meadows, and along rivers, streams and lakes
<i>Ceanothus velutinus</i>	Snowbush	PPL	60-90 days		F to late W	Full sun/part shade		6-10'	Prefers coarse, well-drained loose loam, sandy or clay soil, or rocky conditions. Very drought tolerant
<i>Spiraea betulifolia</i>	Spirea, Birch-Leaf	PPL	No, or 60 days			Sun	surface sow		Satisfactory germination occurs without stratification.
<i>Spiraea douglasii</i>	Spirea, Douglas	PPL	Maybe					3-7'	Fresh seed does not require stratification; dry seed may require 1-2 months cold stratification
<i>Asclepias incarnata</i>	Swamp milkweed		No	No	F, W, Sp	Sun/Part shade	no		Plant seeds in a pot outdoors in the fall, winter or early spring. The wet, cold conditions mimic wild seed propagation in nature and the seeds will germinate in mid spring.
<i>Viola praemorsa</i> (canary violet)	Violet	PPL	12 weeks	No	F	Full sun	shallow to 1/8"	6-20"	Can be naturally or fridge stratified. Young plants go dormant early their first season, but put on a lot of growth their second. In pots and in situ - 5-10 seeds
<i>Verbena hastata</i>	Wild Hyssop, Swamp Verbena	(L)	4 wks	No	F	Full sun/part sun		2-5'	Sand to clay soil; water needs - medium to moist
<i>Grindelia integrifolia</i>	Willamette Valley gumweed	PPL	No	No	F, W, Sp	Sun	Lightly	12-30"	Cool temps enhance germination, so early spring planting is best. Spring sown should germinate within 3-4 weeks. In pots, and in situ sow 5 – 7 seeds.
<i>Achillea millefolium</i>	Yarrow	PPL(L)	No			Sun/Part shade		10-36"	Habitat: Varied; open moist prairies to dry hillsides.
<i>Mimulus guttatus</i>	Yellow Monkey-flower	PPL	No?	No	F, W, Sp	Sun/Part shade	No	12-24"	Keep soil moist after sowing. In pots, and in situ sow very small pinch.

Squash, Winter	Clackamas Maxima Squash (L) Lofthouse Landrace Maxima (L) Lofthouse Landrace Moschata (L) (OSSI)
Sunflower	Lofthouse Mammoth XL (L) SRSC Mammoth Landrace (L)
Tomatillo	Purple Keepers Modern Landrace (OSSI)
Watermelon	New Urban Seed Garden Icebox Mix (L)

Landrace is a locally-adapted, genetically-diverse, promiscuously-pollinated, survival of the fittest crop that fosters food security and community. It is a blend of many varieties and has incredible vigor. It is highly adaptable to a changing growing environment.

Advantages

- Adaptability – more easily adapts to a changing growing environment than heirlooms, open pollinated, and hybrid varieties
- Easy seed saving – you don't have to worry about it crossing with another variety. Crossing is a good thing in a grex or landrace.
- Community – the more we share our grex and landrace seeds with each other, the more genetic diversity we achieve as a community.

Creating your own climate adapting variety (modern landrace)

- Interplant as many different varieties of the same species as you can.
- If you like the taste of the produce, save seed from it and replant as many different varieties as you can next year

- Do not save seed from weak or diseased plants; only save seed from your best plants
- Give the library some of your seeds so your community can use it
